

# Non-linearities

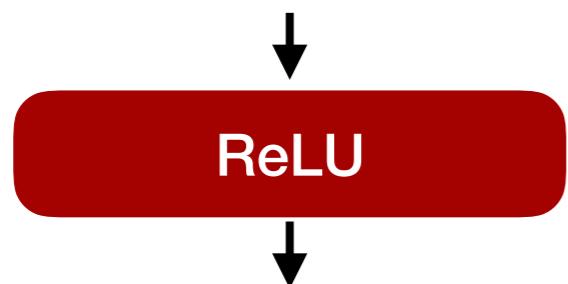

© 2019 Philipp Krähenbühl and Chao-Yuan Wu

# Non-linearities

- Rectified Linear Unit

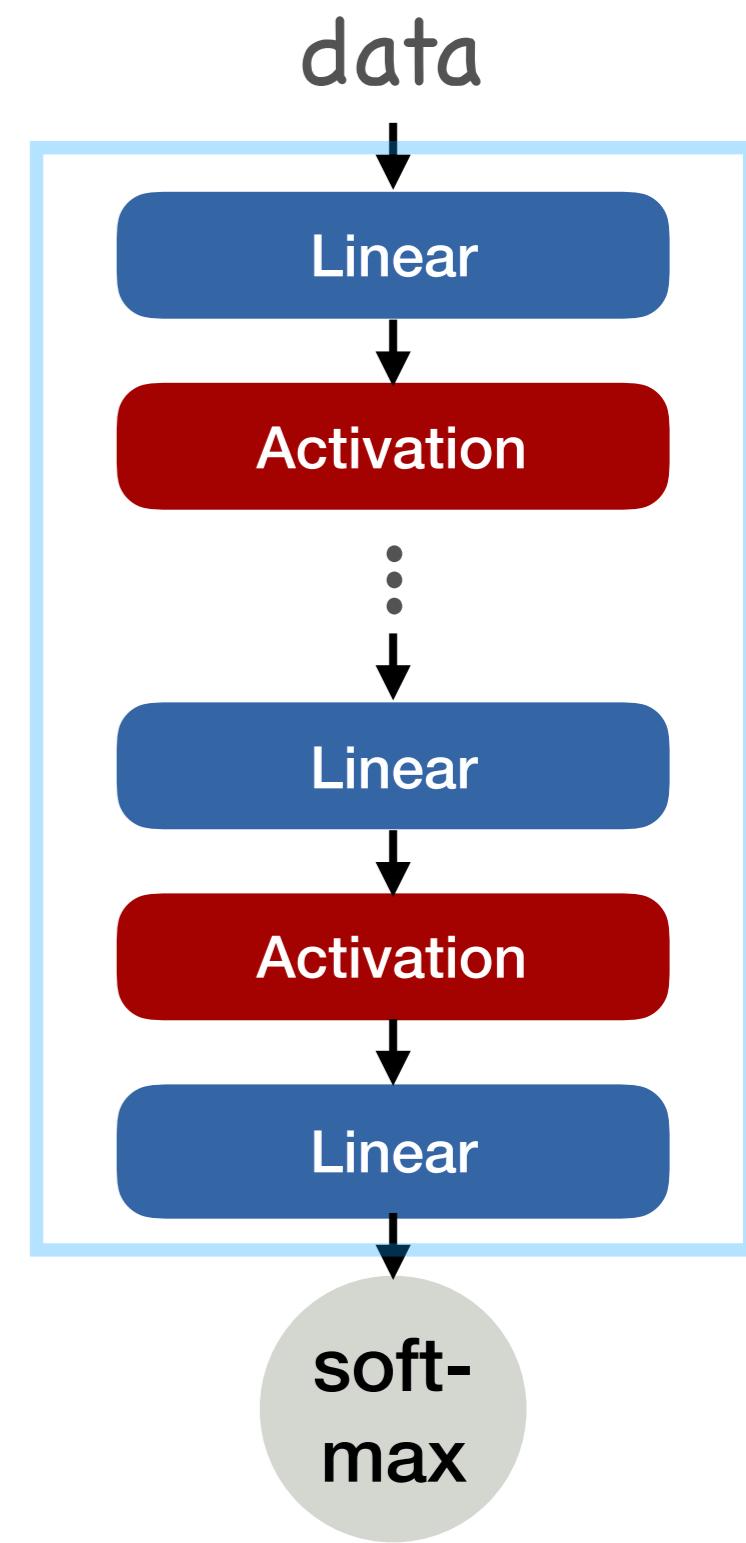

- $\text{ReLU}(x) = \max(x, 0)$

- Non-linear and differentiable almost everywhere

# Deep networks

- Alternates linear and non-linear layers

# A simple example

- “Shallow” network
- Dog paw or not?

# Deep networks

- Class of continuous functions  $f_\theta : \mathbf{x} \rightarrow o$
- Parameters  $\theta$
- Can approximate any continuous function
